

## VIRTUAL ORGANS

The TS 354 Casework Organ, has a lovely Heritage Walnut finished cabinet, recessed side panels, cantilevered keyboards and three specifications of pipe samples from Phoenix Organ's sample library.

Just because it is a virtual organ doesn't mean it has to lack quality.

### TS 354 CASEWORK ORGAN

All Phoenix II PC-based organs run on Linux, use industrial quality touch screens, a standard PC, solid state hard drive, tracker touch keyboards, Phoenix Organs standard high quality pedal board with Canadian Select Maple caps over Ash for strength and to resist warping. There is a robust 2.2 audio channel sound system with mid-range and tweeters placed in the top of the case to reflect off of the ceiling.

Virtual Distance allows the player to switch the pipe samples from NEAR to FAR, and Phoenix uses 5 convolution reverberation settings, a process for digitally simulating the reverberation of a physical or virtual space.
